

Cory Kaser

I am currently a senior, mine engineering major, and will be graduating in May. My semester is going great, all my classes are awesome. I am currently the president of the autonomous underwater vehicle team and a project leader for my senior design project. Also, I am currently a resident advisor for the second year.

PS definitely helped me learn about study skills and time management. It helped me to turn my grades around. I still use the tools I learned in PS today. Being a PS peer facilitator helped me to continue to learn new tools for studying and helped me stay on track.
